PRE-ASSEMBLY DUCT

*“Farfield Company contracted **MKT Metal Manufacturing** to Pre-Assemble Duct for the Millennium Science Complex, Penn State University. The science research complex is a low energy, LEED Design that encompasses 297,000 square-foot building housing two of the university’s premier research organizations – the materials research Institute and The Huck Institutes of the Life sciences.”*

Quote from MEP Engineer

When a customer is looking to save labor costs they have the option of having **MKT** pre-assemble duct prior to site delivery. Several joints of duct or fittings are put together in **MKT's** shop. This saves valuable field labor. In addition, it alleviates time spent sorting duct off of the truck. Critical on public work projects where prevailing wages are a factor.

*“**MKT's** processes made the project profitable and we were able meet job schedule. We were able to save a significant percentage of money out on the field and with labor costs.”*

Jeff Dull, Farfield Company

Manufacturing and Supplying Sheet Metal Duct and HVAC Products since 2004
